

*In the Specification:*

After paragraph 64, please add the following:

Fig. 12 shows a display of the form of the well-known segment-display frequently found on such devices as pocket calculators. Each separate segment is individually illuminatable; the figures show segment 10 as being illuminated while segment 9 is not. The display is therefore presently showing the figure "6". Each segment has an individual appropriately-shaped electrode such that when a voltage is applied between the electrode relating to a segment and a further electrode, then the relevant segment will illuminate.
